Compliance

What is Cloudbric Business Edition (BE)?

Cloudbric BE is a fully managed Web Application Firewall (WAF) and DDoS Protection suite for all service providers and enterprise level clients. Cloudbric BE can be custom installed into any physical or cloud based environment to offer a convenient and easy to manage web security solution without any complicated installation, settings configuration, or need for highly trained security specialists.

What makes Cloudbric BE different than other traditional WAF vendors is our advanced technology. We utilize a signature-less logic based detection with 26 custom rules/algorithms for the highest web attack detection accuracy (low false positives) rate on the market. Furthermore, we offer 24/7 monitoring and maintenance of all Cloudbric technology for automatic troubleshooting without the need to wait in annoying customer support lines. Make web security a worry of the past with Cloudbric Business Edition!

Deployment

Benefits and Features

Signature-less Detection

- Award winning logic based detection that utilizes 26 preset custom rules/algorithms for higher accuracy (low false positives)
- Automatically detects and filters known, modified, and new attacks
- Eliminates the need to pay for costly signature updates from traditional WAF vendors

Fully Managed Security Service

- Requires zero complicated installation, settings configuration, specialist training, etc.
- Very user friendly with an easy to manage console and dashboard

Automated Technical Support

- Offers 24/7 monitoring and maintenance of Cloudbric instances for automatic troubleshooting and service disruption mitigation
- Eliminates the need to wait in annoying customer support queues to resolve product related issues or concerns

Distributable Web Security

- Service providers, such as web hosting companies, will have the ability to distribute elite WAF and DDoS Protection to all end users at a fraction of the cost
